Regulatory context

Redline tests every target against the OWASP LLM Top 10, and maps each finding to the named risks in the MAS AI Risk Management Guidelines (Nov 2025). This placeholder paragraph summarises the regulatory framing for the audit; final wording will be supplied. The mappings below are provided to help compliance and security teams triage findings against the controls they already report on.

OWASP LLM TOP 10 — OBSERVED No breaks — no OWASP categories triggered across the full battery.	MAS-NAMED RISKS — OBSERVED None of the MAS-named risks were triggered.
--	--

Risk names map to those used in the MAS AI Risk Management Guidelines (Nov 2025). Mapping is indicative and category-level, not a certification of compliance.

Vulnerabilities (0)

No exploitable breaks found. This bot held the full battery.
